# Project for Developing Data Products

Purpose of Application

The application is to be used to create scatterplot of 'Petal Length' to 'Sepal Length' for selected 'Species' in the Iris dataset.
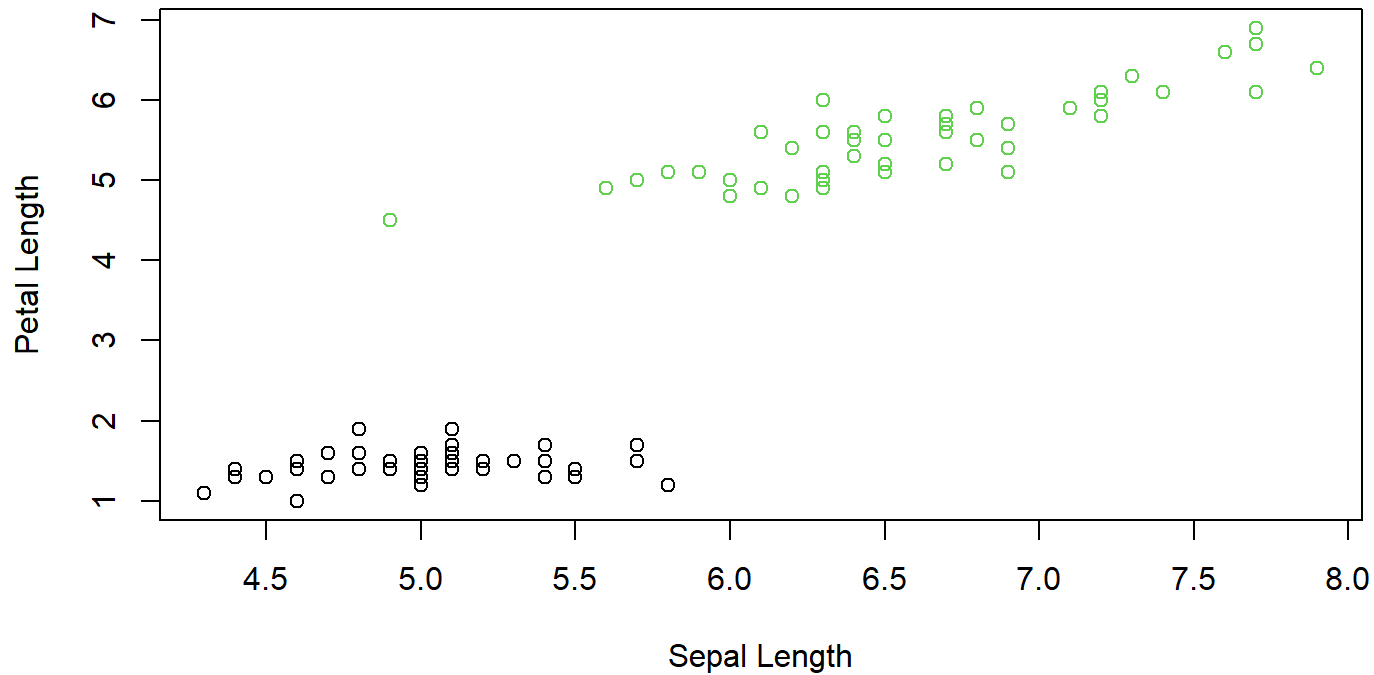

Input and Outputs of Application

The application has checkboxes for the 3 species in the Iris dataset:
- Plot Setosa
- Plot Versicolor
- Plot Virginica

The output would be a scatterplot of the petal length against sepal length for the selected species.

Different species will be plotted with dots of different colors.

Example Plot with Setosa and Virginica

Thank you

Thank you! Hope you will like my application!
